

Review of: "Radiological parameters after LLIF for adjacent-level disease treatment"

Yong Shen¹

¹ Third Hospital of Hebei Medical University

Potential competing interests: No potential competing interests to declare.

1. Lack of description of the LLIF operation
2. Lack of the typical radiological images
3. The references are too old
4. Lack of the pre- and postoperative radiological data
5. Lack of the pre- and postoperative neurological assessment data
6. Follow-up is too short to reflect the advantages of LLIF
7. The study was flawed in design, lacking control group and detailed pre- and postoperative data
