Potential competing interests: No potential competing interests to declare.

Materials and methods:

Laboratory methods:

First, you have to mention methods of sample collection, timing, type of sample (blood, serum), and detailed methods of analysis.

Group 1 ended up with only 10 women, but you mentioned in Table 1 that n=30.

Are none of your measurements significantly different in both groups? Your discussion is all based on the difference between groups, which is not even significant.
