Thyrotropin-Releasing Hormone Analogue

National Cancer Institute

Source

National Cancer Institute. *Thyrotropin-Releasing Hormone Analogue*. NCI Thesaurus. Code C76367.

Any structural or functional analogue that mimics the physiological actions of thyrotropin-releasing hormone (TRH). Although TRH analogues appear to have a minimal influence on the biosynthesis of TSH, they seem to exert various neuromodulating activities, such as central nervous system-stimulating, analeptic, analgesic, antidepressant, and neuroprotective effects.
