Cefadroxil Anhydrous

National Cancer Institute

Source

National Cancer Institute. *Cefadroxil Anhydrous*. NCI Thesaurus. Code C79562.

The anhydrous form of cefadroxil, a semisynthetic first-generation cephalosporin with antibacterial activity. Cefadroxil binds to and inactivates penicillin-binding proteins (PBPs) located on the inner membrane of the bacterial cell wall. PBPs are enzymes involved in the terminal stages of assembling the bacterial cell wall and in reshaping the cell wall during growth and division. Inactivation of PBPs interferes with the cross-linkage of peptidoglycan chains necessary for bacterial cell wall strength and rigidity. This results in the weakening of the bacterial cell wall and causes cell lysis.
