

Review of: "Multi-target effects of flavonoids as PPARG agonists in TCGA cancers"

Jing Tu

Potential competing interests: No potential competing interests to declare.

The entire article is informative and nicely structured to analyze the multi-target effects of flavonoids as PPARG agonists in TCGA cancers. The article needs grammar editing and it is better to add new references. The authors have conducted KEGG to investigate the different pathways connected to tumors. However, it is better to carry out cellular investigations to validate the molecular pathways.
