

Review of: "Evaluating the clinico-biochemical association between stress and chronic periodontitis by estimation of serum cortisol and serum chromogranin-A levels"

Fouad Al Bayaty

Potential competing interests: No potential competing interests to declare.

Good research, eligible for publication

Please find the following comments which I believe it's very important to strengthen the research

Please add the ethics approval number and date which approved by committee of the institute.

Please clarify if you did the calibration for recording the clinical parameters and the kappa test or ICC test.

Its preferable to use the new classification of the periodontal disease (2017).
