Dear Authors.. it was a great honor to review such interesting subject of your manuscript, and the followings are some notes:

1- keywords need to be alphabetically ordered and according to MeSH.

2- Introduction: too much details regarding such well known viral disease.

3- Methods: what sampling technique was used?

what are the inclusions and exclusion criteria?

What are the domains of the questionnaire?

what is the sample size?according to what?

4- Results: total needs to included in the title of the table.

Association among different variables are not so clear.

Please, do not repeat the same things in the results.

6- Discussion: too long.

5- Recommendations need to be included.

6- Conflict of Interest must be added as last part of Discussion.

Thank you.
