Potential competing interests: No potential competing interests to declare.

The manuscript needs the following clarifications:

1. In which year was the study conducted?
2. Inclusion criteria: "were previously diagnosed with diabetes" & Exclusion criteria: "Patients who use metformin and other glucose-modifying medications" – these two seem to be contradictory. Please clarify.
3. "The blood test used was noninvasive and required a minimum-risk procedure with the pinprick technique" – this technique seems to be invasive. Please clarify.
4. Table 1: How did it become 214 from 226?
5. Table 1: Age should be more than 68 (last row, age groups).
6. The correct heading would be "Overweight – nonobese (25-Less than 30)" instead of "Overweight (25-Less than 30)."
7. What is the operational definition of physical activity? Specify.
