The paper has a lot of information regarding engineering education universities in India. There could be a number of papers that may be developed from the submitted work. The paper lacks focus and a clear argument on what the authors want to say about engineering education universities in India. It would help to present a clear problem in relation to the engineering universities in India. The universities were developed in 1964, and one asks what the authors want to say about the development of the universities. Are there new innovations to the existing structure, teaching, learning, and training of teachers? Is engineering education combined with utility studies in the universities to bring a new dimension?
