Potential competing interests: No potential competing interests to declare.

1. The conclusion of the abstract regarding maternal education is not supported by the results as stated in the abstract
2. "2.1 Logistic regression" should come under a section titled "Statistical analysis"
3. The results as reported may not be independent of each other. It is advisable to conduct a multivariable analysis by combining all significant findings from the univariable analysis to determine the adjusted odds ratios (AOR) and their 95% CIs.
4. Table 3.3 may be a multivariate but not a multivariable analysis
