Potential competing interests: No potential competing interests to declare.

1. The experiment conducted was relevant to the objectives of the study. However, the authors need to justify the relevance or benefit of using VR for testing the impact of greenery on balconies on people's well-being, instead of testing it with real balconies (physical environment).
2. It would be much better if the authors could elaborate more on the Discussion and Conclusion sections, particularly to highlight the knowledge contribution and benefit of the study, future research recommendations, and limitations of the study.
