

Review of: "[Review] The antibacterial activity of *Allium sativum*, *Thymus vulgaris*, *Origanum vulgare*, *Curcuma longa*, *Rosmarinus officinalis*, and *Cinnamomum* species against various antibiotic-resistant strains of bacteria: A Literature Review"

Petru Alexandru Vlaicu

Potential competing interests: No potential competing interests to declare.

Dear Author's

Title Length: The title of your paper is too long and should be more concise, accurately reflecting the scope of the research.

Repetition of References: There are instances where you have repeated the same references multiple times, which can be condensed and cited more efficiently.

Insufficient Introduction: The introduction of your paper lacks the necessary background information and context to adequately set the stage for your literature review.

Inadequate Description of Literature Review Process: The methodology used for conducting the literature review is not well-documented. It is essential to provide a clear explanation of the search strategy and criteria used to select the included studies.

Overuse of Phrases: There is a notable repetition of certain phrases, especially the use of "In the narrative review," which needs to be rephrased to improve the overall flow of the paper.

Presence of Small Errors: Several minor errors are present throughout the manuscript, including grammatical, typographical, and formatting issues that need to be addressed.

Excessive Use of Taxonomic Names: There is an unnecessary repetition of taxonomic names (e.g., *T. vulgaris*) that can be reduced without compromising the clarity of the content.

Wrong Citation in the Text: It's essential for the authors to ensure accurate referencing to maintain the credibility of the study.

Presentation of Results: The paper could benefit from presenting some of the findings as table values. Tabulating the antibacterial activity of each herb against specific antibiotic-resistant strains would provide a clearer and more concise overview of the results, making it easier for readers to comprehend and compare the data.

In-Depth Discussion of Chapters: Antioxidant Activity of Herbs, Interactions Between Bacteria and the Immune System and Immunostimulatory Effects of Herbs.
