Hello, sir/madam,

I enjoyed reading the historical perspective of cardiac innervation and how the heart was considered the center of all emotional logic. May I kindly suggest trying to reorganize the flow of thoughts wherein the dates and the various eras can be grouped together to appreciate the evolution better. Certain details seem broken off from the main storyline, which can deviate concentration.

The newer physiological aspects have a nice depth to them, but again, if you could provide subheadings for the same, it would help the readers. Some concepts may not be actually relevant to the said title.

It's a well-written article; it just needs a reordering of ideas to appreciate the concept better. The article can be made crisp by decreasing some information that may be out of the focus of the said title.

Kind regards.
