**Potential competing interests:** No potential competing interests to declare.

The article discusses the models available to scholars of historical demography and describes which approaches can be useful for an investigation into past communities. However, the author emphasizes that demographic research is not without risks and questions that are not easily answered. The bibliography is well-constructed but does not feature a strong innovation. In fact, the most recent publications solely pertain to "agent-based modeling," which proves to be one of the central topics of the essay.
