Dear Pulak Das,

Thank you for sharing your paper. I appreciate the effort you have put into developing this work. However, upon reviewing it, I noticed that the paper currently resembles more of a tutorial or practical guide for a website rather than adhering to the structure and depth expected in a scientific article.

To make your paper more impactful and aligned with the standards of a scientific publication, I would recommend the following:

- **Elaboration and Depth:** Expand on your discussions and provide a deeper theoretical context to support your work. Highlight the novelty of your research and clearly state how it contributes to the existing body of knowledge.
- **Structure and Formatting:** Ensure the paper follows a formal structure—typically including an abstract, introduction, literature review, methodology, results, discussion, and conclusion. Each section should be well-balanced and thoroughly developed.
- **Scientific Writing Style:** Adopt a tone and style consistent with academic writing. Avoid overly casual or instructional language. Aim for clarity and precision while maintaining a formal tone.
- **Citations and References:** Include relevant references to support your arguments and situate your work within the broader research landscape. This will enhance the credibility of your paper.
- **Figures and Data:** If applicable, include data, charts, or figures that substantiate your claims and help the reader visualize your findings.

I encourage you to revisit your draft with these suggestions in mind and revise it to better reflect the characteristics of a scientific article. I believe that with further effort and refinement, your work has the potential to make a meaningful contribution.
