Potential competing interests: No potential competing interests to declare.

1. Author should present the novelty of this work better.
2. Abstract wouldn't present conclusions in a good manner. Please check it and rewrite the final part so that readers can conclude better and find some correlation between the topic and the text.
3. Figure 2 cannot present data clearly. The author should present their work in higher magnification and also show the scale bar clearly in μ or nanometers. Also, Figs. 2 and 3 should be combined.
4. In the text, we have "in in situ." Please change it. For example, you can write for/of instead of in.
5. Why didn't the authors use AFM instead of a profilometer device to measure roughness?
