**Potential competing interests:** No potential competing interests to declare.

The paper is an interesting one, but there are some corrections: 1- Gaussian simulation (reference it)

2-Model of XRF not written in analytical procedures

3-You change abbreviations of contamination factors and not reference it

4-References in text not in the same style, and also at the reference part

5-Mn, not Mo, in table 5 and before the conclusion

6-You must conduct sequential extraction fractionation to know the mode of occurrence of the high concentration of heavy metals

In the end, the work is more important.
