Accessory pancreas

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Accessory pancreas. ORPHA:674

Accessory pancreas is an asymptomatic embryopathy characterized by the presence of pancreatic tissue in other sites of the body such as the splenic pedicle, gonadic pedicles, intestinal mesentery, duodenum wall, upper jejunum, or, more rarely, the gastric wall, ileum, gallbladder or spleen.
