

# Review of: "Medical Physics and Cancer Treatment: Enhancing Precision and Efficacy"

Seyed Alireza Mousavi Shirazi<sup>1</sup>

<sup>1</sup> Physics, Islamic Azad University South Tehran Branch, Tehran, Iran

**Potential competing interests:** No potential competing interests to declare.

This paper focuses only on a brief review of the fields of medical physics, medical radiation, and radiotherapy and their relations with each other. It lacks a proper Results section. As if the author has tried to compile a series of content from elsewhere and other published papers to make up this paper! The paper has structural issues as it lacks a proper Results and Discussion Section, and there are no figures or tables, not even one in this section. Firstly, the respected author had better add some passages associated with his scientific work. Secondly, the author must add at least one figure or table extracted from his scientific work to this section, although the type of this paper is a Review article.
