Potential competing interests: No potential competing interests to declare.

In my opinion the manuscript does not meet the required standards for publication.

1. Figures need labels in English and not Chinese.
2. TRMM precipitation data are no more updated now, why do not exploit other satellite precipitation products, e.g. IMERG precipitation?
3. Bibliography is generally very scarce and there isn't any mentions of previous studies over the region.
4. The intercomparisons are only at monthly and annual scales, what about daily scale?
5. In the trend analysis significance level is not specified.
