

Review of: "Nanomaterials: History, Production, Properties, Applications, and Toxicities"

Ruthvik Kaja

Potential competing interests: No potential competing interests to declare.

The manuscript titled "Nanomaterials: History, Production, Properties, Applications, and Toxicities" by Nisar et al reported on the review of nanomaterials. After careful revision, I would like to give it a minor revision.

1. The alignment of the text should be justified.
2. Some of the recent work in nanomaterials can be added, such as: Materials Today Chemistry 26, 101182, 2022; 10.1016/j.matpr.2023.06.188; Micro and Nano Systems Letters 11 (1), 3, 2023.
3. English corrections need to be carefully evaluated. Many grammatical errors are present throughout the text.
