Monoclonal Antibody 3A1

National Cancer Institute

Source

National Cancer Institute. *Monoclonal Antibody 3A1*. NCI Thesaurus. Code C2061.

A murine monoclonal antibody that recognizes CD7 (previously known as 3A1), a cell surface antigen expressed by most normal mature peripheral T cells and T cell acute lymphoblastic leukemias. Monoclonal antibody 3A1 is used to diagnose and classify T cell malignancies. This agent can also be conjugated to toxins for potential use in cancer immunotherapy. (NCI04)
