Diastrophic dwarfism

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Diastrophic dwarfism. ORPHA:628*

Diastrophic dwarfism is a rare disorder marked by short stature with short extremities (final adult height is 120cm +/- 10cm), and joint malformations leading to multiple joint contractures (principally involving the shoulders, elbows, interphalangeal joints and hips).
