It was a pleasure to be part of the Qeios reviewers. In my simple analysis I will mention the following points:

- 1- The summary must be adjusted to better explain the results of the research.
- 2- The literary review should be on a topic and not just a few citations in the introduction.
- 3- It would be interesting to justify the tool used "Cool Farm". The IPCC has a tool that allows the comparison of data at a local and at global level.
- 4- Miss the source of the tables and figures.
- 5- A geographical representation of the areas studied would be interesting.
- 6- Review the conclusions based on the results.
