**Potential competing interests:** No potential competing interests to declare.

While the passage provides a thorough analysis of the dredging issues in the Larache region of Morocco, some omissions and shortcomings can be identified:

**Lack of Quantitative Data:** The text does not provide specific quantitative data on urban growth, sand demand, or the consequences of dredging. Including statistics and figures would enhance the credibility of the analysis.

**Absence of Temporal References:** The passage does not specify the time period to which it refers. Including a temporal reference would be helpful to contextualize the analysis over time.

**Lack of Cited Sources:** There are no specific references to sources used to support the arguments. Citing studies, reports, or experts would strengthen the validity of the claims.

**Primarily Focused on Consequences:** While the passage addresses the consequences of dredging, it could be enriched by further exploring the underlying causes of rapid urban growth and increased sand demand.

**Lack of Divergent Perspectives:** The text seems to adopt a predominantly critical perspective towards dredging. Including divergent opinions or contradictory viewpoints could provide a more balanced view of the issue.

**Emphasis on Complexity without Specific Details:** Although the text emphasizes the complexity of the situation, it does not provide sufficient details on the specific aspects that make the situation complex. Clarification would be beneficial.

**No Political or Institutional Proposals:** The passage focuses on practical measures at the dredging level but does not propose political or institutional solutions to address long-term structural issues.

Addressing these points would enhance the passage in terms of clarity, credibility, and relevance for readers.
