Comments to the editor

This original research study examines **The Efficacy of Copper Nanoparticles in Treating Viral Skin Infections: A Systematic Review and Meta-Analysis**. The selection of the research topic is appropriate, given that the study findings have important implications. The study is fairly rigorous, generally well organized, and well written. My specific comments below are meant to critique sections of the manuscript. Addressing these will improve the quality of this manuscript with minor corrections.

Comments to the Author

The title needs revision as if the author highlights the place/locality of collection, to make it distinguished from others.

The abstract is not strong and needs revision, and give the concluding remarks. Please do not use abbreviations in the abstract.

The manuscript needs revision for grammar and syntax mistakes.

The author should clearly mention the impact of the study.

A discussion section is never complete without a paragraph on the limitations of the study (and optionally the strengths).

The references section should be revised with the latest references. Kindly follow the author guidelines.
