Below are the Review notes for the manuscript entitled "Determinants of Corporate Finance Performance in Africa Insurance Market"

1. It is preferable in the title to use "factors affecting performance" rather than determinants of performance because the latter may be implicitly understood as obstacles that limit performance.
2. The abstract should mention the type of effect for each variable, whether it was positive or negative.
3. The abstract should mention the sample, research limitations and implications, practical benefits, and originality.
4. The hypothesis development section should be supported by relevant literature.
5. Explain the reason for using ROA to measure performance without other alternative measures of performance such as ROE and ROI.
6. In Figure 1 financial performance should be used instead of return on assets.
7. The sample size should be determined based on scientific methods, including the Steven Thompson equation
8. The presence of linear interaction between the independent variables should be checked and the data should be normally distributed.
