Review

The paper entitled "Natural Surveillance and Natural Access Control: Implementation strategies for enhancing Safety in Indian Neighborhoods" presents an interesting piece of research.

The paper contains 18% plagiarism/similarity index as per attached pdf file.

There are many **major modifications** regarding the paper which should be incorporated by the author before publication. These have been incorporated as hereunder:

Technical comments:

1. The paper requires to be supplemented with scientific facts and statistics in present scenario in Indian context and in Global context.
2. Elaborate introduction with more comprehensive view of literature pertaining to the study.
3. Please refer to recent and latest research works as reference in this regard.
4. Add context and background to the research question.
5. Methodology is very vague; should explain systematic carrying out of research work with emphasis on usage of tools, methods; their relevance and modus of operandi.
6. All the tables are without source or references.
7. The statements should be clear and crisp. Avoid too long statements.
8. Paper is more generalised form of discussion lacking all scientific facts, past research work in the field, description of methodology, and detailed discussion of the work.
9. Absence of parameters/aspects in relation with scientific approach along with absence of use of qualitative and quantitative methods adopted to collect and analyse the data.
10. Absence of detailed scientific discussion and results section makes it a mere generalised discussion and not research work meant for publication.
11. Conclusions are without scientific rationale. Please elaborate them in context to research question.
