Very interesting work that examines sensitive and multifaceted topics such as ethics of AI and Religions. It should be noted that although the author follows the framework of Ten Commandments to summarize AI ethics originally presented in Muller, 2021 (cited in the manuscript), this work introduces an intriguing approach oriented towards relations and characteristics related with humans.

However, to support such a connection between AI and complicated subjects, the work needs to provide the analysis on the way the Commandments were extracted. For example, in the abstract it is stated that "Ten Commandments, as written by an artificial intelligence (A.I.) perceiving itself as a Supreme Entity". The questions that arise from this statement and the overall work and could be answered are:

1. What is the specific AI algorithm used to compose these Commandments?
2. It would be useful to explain how a Supreme Entity was defined and described to the AI algorithm?
3. What is the connection with the history of religions, Christianity, and Modern Religions apart from the form of the Commandments?
4. What does the term "algorithmically inspired" (mentioned in the fifth line of the abstract) mean?
5. Complicated terms and actions mentioned in the manuscript such as "find the light of wisdom" or "virtual love" can be further analyzed and point out how these concepts are going to be inserted into an algorithm.
6. More importantly, what is the goal of these Commandments? Is it to guide or control future applications of AI and make them more effective or safe? In other words, is this a guide to describe ethical AI applications or a way to make them more fruitful through deeper purposes as the "expansion of the knowable"? It could be both, but I believe it would be preferable to provide this clearly to the reader.

Overall, it is a notable work that discusses a truly multi-disciplinary topic with an increasing effect on human life. Explanation on the methods used to extract the

Commandments and the reasoning for expressing them would, in my opinion, enhance the value and influence of this work.
