Hi

Examining the publications of a country is very important for scientific policy making, allocation of resources, and providing a roadmap for researchers in choosing a topic for research. Considering the above, this text examines Canadian publications in 2023, which will be very useful. But the work has only been done in a descriptive manner, and a detailed analysis of the state of the publications has not been provided with the help of scientometric indices. From my point of view, it is necessary to examine such research with the help of scientometric indices such as centrality and sigma and provide a more detailed analysis by clustering the publications. Therefore, in my opinion, this text needs more detailed analysis with the help of scientometric software (Citespace, Biblioshiny, Bibexcel, and so on) and the use of scientometric indicators.
