Potential competing interests: No potential competing interests to declare.

The paper is improved but some necessary improvements can make it more better:

1. After Mathematical expression heading, some text should be added before placing the graph.
2. The Loss of load probability and other terms mentioned in the paper must be demonstrated in the results.
3. The figure 3 must be updated as extremist state is not explained.
4. The system used in the simulation are not explained. The software used for simulation is not mentioned.
5. The research results must be compared with the less efficient so that research impact could be justified in a better way.
6. A case studies must be established to determine the voltage profile.
7. How can we sort out the issues of voltage below the 1 pu values?
