# MTTP wt Allele

National Cancer Institute

## Source

National Cancer Institute. *MTTP wt Allele*. NCI Thesaurus. Code C116415.

Human MTTP wild-type allele is located in the vicinity of 4q24 and is approximately 60 kb in length. This allele, which encodes microsomal triglyceride transfer protein large subunit protein, is involved in triglyceride, cholesteryl ester, and phospholipid transport. Mutation of the gene is associated with abetalipoproteinemia.
