Comments to editor

This manuscript "**An Investigation of The Phytochemical Richness of Fresh Musa Paradisiaca L. (Plantain) Stem Juice and Its Anticonvulsant Potential on Pentylenetetrazole (Ptz)- Challenged Rats**" - the selection of the research topic is appropriate, given that the study findings have important implications. The study is fairly rigorous, generally well organized, and well written. My specific comments below are meant to critique sections of the dissertation. Addressing these will improve the quality of this manuscript with minor corrections.

Comments to Author

Title needs revision if the author highlights the place/locality of collection, to make it distinguished from the others.

Abstract is not strong and needs revision to give the concluding remarks.

Manuscript needs revision for grammar and syntax mistakes.

Author should clearly mention the impact of the study.

A discussion section is never complete without a paragraph on limitations of the study (and optionally the strengths).

References section should be revised with latest references.
