

Review of: "Nigerian Youths' Perception of Privacy and their Self Disclosure on Social Media"

Santi Budiman

Potential competing interests: No potential competing interests to declare.

This study intricately explores the perceptual nuances of the younger generation, presenting an engaging title that piques interest. In the role of a reviewer from Sekolah Tinggi Ilmu Ekonomi Isti Ekatana Upaweda, Indonesia, it is advisable when presenting the youth perception to elaborate on which generation(s) or to specify which youth generation(s) the study pertains to. The research also comprises four key inquiries, incorporating two qualitative questions. I would like to propose a reinforcement of the research findings, specifically related to the responses of the qualitative inquiries, by using focused group discussions (FGDs) too. In my capacity as a reviewer, I express an affirmative stance toward the acceptance of this paper.
