

Review of: "Demographic and Clinical Characteristics of Refugee Children Utilizing Healthcare Services of Türkiye (2021-2022): A Single-Centre Study"

Desta Kasa

Potential competing interests: No potential competing interests to declare.

General:

This study, which presented the pattern for health care utilization of refugee children in Istanbul associated with their demographic and clinical characteristics, has provided important scientific evidence that would help to improve health service delivery to refugee children populations.

Major comments

- The abstract should be written in a way that reflects the contents of the manuscript (Rationale, Method, Results, and Conclusions), as it is well presented in the body of the manuscript.

Minor comments: showed in the Table attached.
