Rosiglitazone Cholate

National Cancer Institute

Source

National Cancer Institute. *Rosiglitazone Cholate*. NCI Thesaurus. Code C96870.

The cholate salt form of rosiglitazone, an agent belonging to the glitazone class of antidiabetic agents with antihyperglycemic and anti-inflammatory activities. In addition to its ability to lower blood glucose levels, rosiglitazone also exerts anti-inflammatory activity through its ability to inhibit nuclear factor-kappaB (NF-KB) activity and increase I-kappaB levels. In addition, rosiglitazone may cause fluid retention and may worsen congestive heart failure. This agent is also associated with an increased risk of heart attacks.
