Primary cutaneous anaplastic large cell lymphoma

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Primary cutaneous anaplastic large cell lymphoma. ORPHA:300865*

Primary cutaneous anaplastic large cell lymphoma (C-ALCL) is a rare T-cell non-Hodgkin lymphoma that affects the skin and generally shows no extracutaneous involvement at presentation. It belongs to the spectrum of primary cutaneous CD30+ lymphoproliferative disorders along with lymphomatoid papulosis (see this term) with which it shares overlapping clinical and histopathologic features.
