Review article by Evan Griffith, Job Ronoh Kipkemai, Jeffrey C. Mariner et al.'s article [Expanding Participatory Epidemiology to Explore Community Perceptions of Human and Livestock Diseases among Pastoralists in Turkana County, Kenya](#)

Comments:

1. I appreciate the extensive Participatory epidemiology (PE) work undertaken by the authors that will be helpful in facilitating people to identify and solve their health needs especially in poor countries. The authors have successfully implemented a low-resource method to identify community disease priorities and knowledge. With the looming dangers of zoonotic diseases, and the concept of One Health, it is necessary to partake more such community studies to understand the etiology of community diseases mostly consistent across human and livestock.
2. Manuscript is well written technically and I appreciate the detailed data provided.
3. The manuscript should be accepted and widely circulated for its larger knowledge-based community services.
