Potential competing interests: No potential competing interests to declare.

There is no doubt that this topic is very interesting. AI and education is a very hot and leading-edge topic. It can be seen from the content of the paper that the author has done a lot of work, and my suggestions are only for the author's reference.

1. Appropriately increase the literature on the impact of generative AI on education, especially those papers which were published in 2023. As I know, there are a lot of academic achievements on generative AI and education that were published and discussed in the world. And we should know that generative AI is different from conventional or traditional AI;

2) If the paper could add some changes in how AI is affecting education, it may be better to explain some mechanisms of their action, so as to answer why, rather than just what the result is.

3. It would be nice to have a real case study to prove your point.

Again, my comments are a reference for you.

I am looking forward to the authors making more progress and academic achievements.
