

Review of: "Benefit distribution and stability analysis of enterprise digital servitization ecosystem from the perspective of value co-creation"

Yong Liu

Potential competing interests: No potential competing interests to declare.

This paper addresses the issue of digital servitization ecosystem and starts from the perspective of value co-creation. Taking unfair benefits distribution among enterprises and digital servitization transformation into account, the paper uses coalitional game theory, builds a benefit model of enterprise digital servitization cooperation of DSE enterprises, and obtains the corresponding conclusions. The paper has certain theoretical and practical significance. However, it still has the following shortcomings:

- 1.The introduction part lacks a clear definition of servitization.
- 2.In the literature review, there is no certain overview of value co-creation which mentioned in the title.
- 3.In section 3, the author could add a description of the methodology used to collect and analyze the data utilized in this section.
- 4.In section 4, the author should add an explanation of the results and conclusions to make it easier for the reader to understand.
- 5.In section 5, the graphs need to be further illustrated and the description and explanation of the results need to be clearer.
- 6.In section 6, the discussion of the wider implications of the study is slightly limited and could be further elaborated.
- 7.English expression and grammars need to be checked.
