

Review of: "The Imperative of a Comprehensive One Health Approach for Mosquito-Borne Disease Control in Indonesia"

Anjali Rawani

Potential competing interests: No potential competing interests to declare.

The author repeatedly mentioned one health program, an integrative approach, interdisciplinary collaboration between various sectors, etc. All these approaches sound good on the theoretical ground but are tough to implement practically. Although the author said many things, he clearly and hardly explained any one of them. So, for the eradication or control of mosquito-borne diseases from a country like Indonesia, at first, mass education is necessary regarding the diseases and vectors responsible for them. An awareness campaign to identify the breeding sites and uses of natural insecticides among the common people will make the eradication program more quick and successful.
