Potential competing interests: No potential competing interests to declare.

Dear collages,

Introduction part - you have started sentence about illegal money lending, and then continue that entrepreneurs are relocating resources to stable country/location, I think there should be soft transfer to such sentence. Following sentence is also not connected with previous "In this sense, opportunities represent the offerings of a new product or service into existence (Eckhardt & Shane, 2003) and the major outcome is the creation of wealth via the accumulation of profits. Entrepreneurship in economic development and inequality remains a relatively under-researched phenomenon."

This sentence also is not connected with previous

Lingelbach et al. (2005: p1) pointed out 'Entrepreneurship in developing countries is arguably the least studied significant economic and social phenomenon in the world today.

4 Entrepreneurship in Morocco - I would make this as part above, this is only quick overview on most important conference, this can not be called like this.

Title 3,4,5,6, all should be merged to one file, Contextualization?

7. Material and methods

I would suggest to add few sentence on how questionnaire is created? Maybe to enrich paper with some visualizations where study has been performed.

8. Results and discussion

Table 1-4, merge into one table, it is easier to follow.

Radicalization and business creation: ANOVA Test - delete, it is not necessary to make title.

I have not be able to provide more insights on this, but I believe significant improvements can be done in methodology part, it is not clear how questionnaire is developed. Results and discussion should be written in more cohesive way, not to

divide answers in many tables, instead making larger table(s) and then to immediately make connection with previously identified results.
