

Review of: "When cat rescue fails — Part 1. Lion-clip shaving, enilconazole bathing and oral itraconazole treatment failed to control an iatrogenic *Microsporum canis* outbreak in a shelter: but a novel ophytrium-chlorhexidine shampoo and mousse treatment succeeded in the home"

Potential competing interests: No potential competing interests to declare.

Scientifically, it is an informative article with a nice collection of experiments. Comprehensive and very well written.

Suggestions:

Addition of more references and new experimental data.

In the grammatical typing of the title of the article, as I think instead of **mousse**, it should be **mouse**.
