Review of: "E-learning and the Use of AI: A Review of Current Practices and Future Directions"

Bhupal Bhattacharya[1]

1 Raiganj University

The article provides a comprehensive review of the current state of e-learning and the use of artificial intelligence in education. The article emphasizes the importance of ethical considerations in the integration of AI in e-learning. The inclusion of a case study on the use of ChatGPT in e-learning adds practical insights to the article. The case study demonstrates the potential of ChatGPT in providing personalized learning experiences and supporting students in various subjects.

However, there are a few areas that could be improved upon:

The article could have delved deeper into the specific benefits and limitations of AI in e-learning. Providing more specific examples, case studies, or research findings would have strengthened the argument for the benefits of AI in e-learning.

The discussion of ethical considerations associated with AI in e-learning is somewhat limited. There are other important ethical considerations that could have been addressed, such as Accountability and the potential impact of AI on socio-economic disparities.

The article heavily relies on a single case study involving ChatGPT to illustrate the potential of AI in e-learning. It is not enough to draw broad conclusions about the effectiveness of AI in e-learning. Including multiple case studies or empirical research from diverse populations would have provided a more robust analysis of the impact of AI on student learning outcomes.
