Review of the manuscript entitled "Process for implementing a Quality Management System (QMS) adapted to Architectural Practices in Tunisia, in the case of ISO 9001".

The manuscript is interesting and has great potential to contribute to the body of knowledge and be of great benefit to architectural practices in Tunisia. However, the following points need to be addressed:

Literature Review

There is no literature review section. Please include all sections after the introduction as subsections under the literature review section, and please consider adding more recent peer-reviewed articles, at least 10 to 15 or more from 2019 to 2024, as the overall manuscript has very little literature and most of the studies are outdated.

Methodology

Methodology section missing. It is not clear what methodology was used. Please include this important section. The methodology used is very important.

In a nutshell, it is an interesting article that needs improvement. Thank you for the opportunity to review this manuscript.
