Potential competing interests: No potential competing interests to declare.

The authors aim to generate the dataset on Small-Mammal Detections in West Africa and their Associated Micro-Organisms as a comprehensive and valuable resource for understanding the intricate ecological relationships in this region. It offers a rich compilation of data that sheds light on the interactions between small mammals and their associated micro-organisms, providing a foundation for diverse research avenues in ecology, disease ecology, and conservation biology. This dataset serves as a pivotal asset for researchers seeking to delve into the complexities of wildlife-microbe interactions, facilitating further exploration and analysis in this critical field.
