Amlodipine Besylate/Benazepril Hydrochloride

National Cancer Institute

Source

National Cancer Institute. *Amlodipine Besylate/Benazepril Hydrochloride*. NCI Thesaurus. Code C29168.

Having a substantial blood pressure lowering capability, Amlodipine Besylate Benazepril Hydrochloride contains a dihydropyridine calcium blocker (amlodipine) and an angiotensin-converting enzyme (ACE) inhibitor (benazepril). A long-acting calcium channel antagonist, Amlodipine inhibits transmembrane calcium influx into vascular smooth muscle. Blocking ACE, Benazepril decreases vasopressive plasma angiotensin II. (NCI04)
