I found the article title (Use of the experimental designs as an approach to optimize the inhibition efficiency of a Pyridazine derivative against corrosion of steel in an acidic medium) a very interesting topic, the authors did a great job and all calculations were very clear and the results were interesting. Also, the article was well-written and the authors used clear English with minor grammatical errors.

despite that, they only need to change their references because most of the references they used were old and they should renew them with new articles for the last 4 years maximum.

another issue is they need to add some literature reviews for the same subject to support their results completely.

Best regards
