Potential competing interests: No potential competing interests to declare.

- The topic is good but need to be spatially located. this way seems to suggest that the author discuss semi-arid regions at the global scale but the content of the manuscript is mainly about the Sub-Saharan Africa
- I suggest the author add a map of the semi-arid regions he is discussing in this manuscript
- Two references have been cited too many time in the manuscript in the way it looks like the manuscript is about those two references. the reference are: Koohafkan, P., & Stewart, B. A. (2008) and Suhas et al., 2011. I suggest the author find more recent references for better comparison.
- in case, the study is not at global scale, the title need to precise the region concerned by the study
