**First of all I would like to thank for your invitation to read and reveiw this article**

**Dear Authors, I hope you found this message**

Review result of "Knowledge, Attitudes, and Practice (KAP) Study for Reducing Invalid Vaccine Doses in Routine Immunization"

General comment this manuscript will contribute great impact to EPI improvement but it needs high improvement in general structure and language

## **Abstract**

The abstract part should contain introduction, methodology, result, and discussion in short paragraphs. However in your abstract part the main research methodology is not well explained.

## **Methods**

In methodology part the sample size in methodology and the sample size in result is different which is 440 in method part and 456 in result part

## **Result**

In your result part page 9, table 5 how do you calculate the coverage percentage? The denominator is not clear since the sample size is 456 and the number of vaccinated children is 453.

## **Discussion**

General comment on the discussion part is the research reports should discussed against the previous study literatures and the standards but in the discussion part you only repeat the result.

Thank you

With regards!
